Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-30 (canceled)

31. (previously presented): An apparatus for reducing the moisture content in a food product, comprising:

- a housing;
- said housing having a first drying zone and a second drying zone;
- a support substrate configured to separate and support pieces of a food product;
- a conveyor;
- said conveyor configured to move said substrate and said pieces of food product through said first and second drying zones;
- a first heat source;
- said first heat source configured to circulate heated gas through said first drying zone at a first temperature;
- a second heat source;
- said second heat source configured to circulate heated gas through said second drying zone at a second temperature; and
- an ultrasound source;
- said ultrasound source configured to expose said food product in at least one of said drying zones to ultrasonic waves without compressing said food product.

Appl. No.: 09/963,360
Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

32. (previously presented): An apparatus as recited in claim 31:

wherein said first heat source is configured to circulate said gas through said housing at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot; and

wherein said second heat source are configured to circulate said gas through said housing at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot.

33. (previously presented): An apparatus as recited in claim 31:

wherein said first heat source is configured to circulate gas through said first drying zone at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot; and

wherein said second heat source is configured to circulate gas through said second drying zone at a rate of rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot.

34. (canceled)

35. (previously presented): An apparatus as recited in claim 31, wherein said support substrate comprises a plurality of spheres.

36. (previously presented): An apparatus as recited in claim 35, wherein said conveyor includes a plurality of vanes having an intermediate area containing said spheres.

37. (original): An apparatus as recited in claim 35, wherein said spheres are held in a container placed on said conveyor.

Appl. No.: 09/963,360
Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

38. (original): An apparatus as recited in claim 31, wherein said ultrasonic source and at least one said heat source are configured to simultaneously expose said food product to said ultrasonic waves and said heated gas.

39. (original): An apparatus as recited in claim 38, wherein said ultrasonic source is configured for exposure at wavelengths within the range of approximately 20 KHz to approximately 100 KHz for approximately fifteen to ninety minutes.

Claims 40-58 (canceled)

59. (previously presented): An apparatus for desiccating a food product, comprising:

an ultrasound source;

said ultrasound source configured to subject a food product to ultrasonic waves without touching said food product;

a first source of air heated to a temperature of approximately 190° F to approximately 210° F and configured to circulate heated air around the food product for approximately fifteen minutes;

a second source of air heated to a temperature of approximately 170° F to approximately 190° F and configured to circulate heated air around the food product for approximately fifteen minutes; and

a third source of air heated to a temperature of approximately 150° F to approximately 170° F and configured to circulate heated air around the food product for approximately one hour.

Appl. No.: 09/963,360
Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

60. (previously presented): An apparatus as recited in claim 59, wherein said first, second and third sources of heated air are configured to send heated air through said housing at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot.

61. (previously presented): An apparatus as recited in claim 59:

wherein said first source of air is configured to circulate heated air at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot; and

wherein said second source of air is configured to circulate heated air at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot; and

wherein said third source of air is configured to circulate heated air at a rate of between approximately 150 cubic feet per minute per square foot and approximately 450 cubic feet per minute per square foot.

Claims 62-68 (canceled)

Appl. No.: 09/963,360
Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

Please Add the Following New Claims:

69. (new): An apparatus as recited in claim 31, said housing further comprising a third drying zone.

70. (new): An apparatus as recited in claim 31, further comprising means for recycling circulated heated gas.

71. (new): An apparatus as recited in claim 70, wherein said recycled gas is circulated between drying zones.

72. (new): An apparatus as recited in claim 71, wherein said recycling gas is circulated from said second drying zone to said third drying zone.

73. (new): An apparatus as recited in claim 31, wherein said heated gas comprises nitrogen.

74. (new): An apparatus as recited in claim 31, further comprising means for separating said food product from said substrate.

75. (new): An apparatus as recited in claim 31, wherein said means for separating said food product from said substrate comprises a vibrating perforated table.

76. (new): An apparatus as recited in claim 31, wherein said second heat source comprises a heat exchanger.

Appl. No.: 09/963,360
Amdt. Dated: 06/28/2005
Off. Act. Dated: 02/28/2005

77. (new): An apparatus as recited in claim 59, wherein said ultrasound source is configured for exposure at wavelengths within the range of approximately 20 Khz to approximately 100 KHz.

78. (new): An apparatus as recited in claim 59, further comprising a plurality of ultrasound sources.

79. (new): An apparatus as recited in claim 59, further comprising a support substrate configured to separate and support pieces of a food product.

80. (new): An apparatus as recited in claim 79, wherein said support substrate comprises a plurality of spheres.
